

In the framework of a research project of the Belgian Defense entitled SOCMINTEX (**Social Media Intelligence Exploitation**), we are looking for a **full-time research scientist** with a Master of Science degree in Computer Science, (Applied) Science or Engineering.

Social media mining is a recent and emerging field which combines theories and methodologies from different disciplines to formally represent, measure, model, and mine meaningful patterns from large-scale social media data.

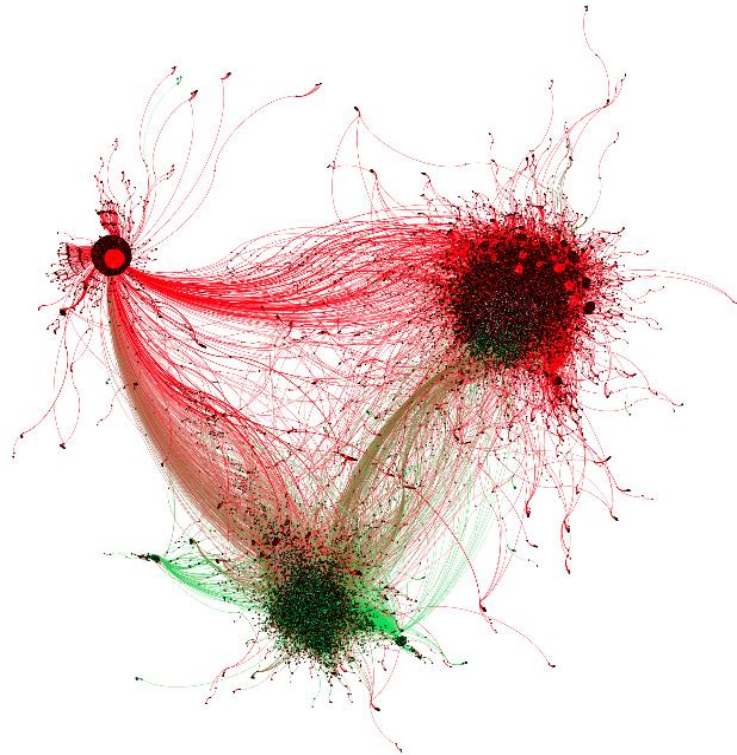

Fig: Visual representation of a twitter dataset

You will be part of the team that develops the SOCMINTEX toolbox containing different modules including:

- Data collection from various social media data sources
- Analysis and visualization of network topology (including evolution of topology over time)
- Analysis of user activity (metadata, natural language processing, pattern recognition)
